aquaGEO™

Effective Tools at your Fingertips!

FMS MOBILE APP

Facilitate the field data collection during your interventions on water and sewer networks

Fire Hydrants and Valves Inspection

– Mobile App that makes it easy to locate and enter data from fire hydrants and valves during your inspection and maintenance activities

– Instantaneous validation of the data entry according to the make and model of the fire hydrants

– Computerized compilation of inventory data and the physical state of the elements giving you quick access to real-time data

– Update and validation of the inventory on field and relevance of deficiencies

– Elimination of papier inspection data sheets

– Automated import of collected data eliminating the transfer of handwritten data

Unidirectional Flushing

– Promotes, during field execution, digital capture and import data related to the unidirectional flushing program developed in the aquaGEO database

– Elimination of paper field execution journals

– Fast real-time access to the flushing and actual volume of water used

WEBCAST SERVICE

Access the webcast of progress thematic maps, data and results

– Web-map access platform allowing the consultation and the diffusion of the work progress

– Access to work in progress, interactive map to inventory and/or status data

– Generate electronic plans and daily report, weekly report or various results

– Very useful for public works, fire and engineering services as well as to respond to citizens

AQUA DATA
